

JUDGE NETTING

We engineer, construct, and maintain waste and dust retention and wind deflection barriers for waste management, recycling and other industries.

Judge Netting Inc. has over 30 years of experience in construction, maintenance, design and engineering. We have built strong relationships with the leading suppliers in the United States and are the undisputed leader in this unique field.

- ***Plumb structures***
- ***Taut guy, vertical, horizontal, and support cables***
- ***Durable net and fabric***
- ***Engineered foundations and poles***
- ***Safe construction practices with an excellent EMOD***
- ***Pride and craftsmanship***
- ***Professional, prompt, and courteous service***

Hay Road Landfill; Vacaville, CA

Over 3,500 linear feet of landfill containment barrier has been installed at the old B&J Landfill in Vacaville, California. This was engineered for 80 mph winds and up to 50% wind solid. Located in a persistently windy area, this successful project has significantly reduced trash cleanup cost. The barrier is being extended as the landfill grows and the design includes the capability of relocating the poles and netting as needed at a future date. The netting has a full value 6 year warranty, is UV treated, and will withstand the extreme demands placed upon a trash retention barrier in a very windy climate.

Mesa County Landfill; Grand Junction, CO

3,200 linear feet of 20 foot high trash retention netting built around the Mesa County Landfill to control flying trash. It was constructed in an effort to reduce the clean-up costs, appease environmentalist and government agencies, and keep litter out of a newly constructed composting facility. This project was designed for 50% solid and 80 mph winds with specially engineered foundations where the barrier was constructed on existing rubbish fill.

East Stockton Transfer Station; Stockton, CA

The East Stockton Transfer Station is a transfer and recycling station and has been at the same location for decades. Encroaching development, increasingly strict regulation from the City of Stockton, and environmental issues necessitated the complete enclosure of the entire outside sorting area of this facility. Judge Netting worked with this family owned company to design and construct an enclosure that would provide privacy, wind protection, ventilation and dust and trash retention. The enclosure was engineered for local building department approval. This structure covered over one full acre with no mid-span support. According to the owner, "the structure exceeded our expectations and saved us nearly \$800,000 dollars over a conventional enclosure." This type of installation provides privacy and wind reduction on the sides as well as ventilation and 100% litter retention (note the netting top) without any center support poles to encumber equipment operations.

Rio Bravo Generating Station; Fresno, CA

The Rio Bravo Generating Station is a co-generation facility producing electricity from natural agriculture by-products. When a glass production facility was built adjacent to the property, dust containment became an absolute necessity. A 40 foot high dust containment barrier was constructed to prevent the dust from leaving the site and entering the glass plant next door. Judge Netting designed an effective dust screen and the barrier was constructed without disrupting operations at the plant. The screen is 750 linear feet, is engineered for a 85% solid wind load, and utilizes a high strength fabric with numerous extra high strength horizontal supports. This barrier provides security, dust containment and privacy and has eliminated the environmental problems plaguing the adjacent manufacturing plant.

Judge Netting provides turn-key solutions to public and private landfills, recycling centers, transfer stations, co-generation plants and other industrial facilities. Installations vary from standard trash retention fence barriers to fully free standing enclosures.

We provide free on site consultations anywhere in the Western United States, (including Hawaii).

Tap our experience and expertise for solutions to your demanding debris and dust containment problems.

“A dependable contractor is a rare find. Judge Netting does what they say they will do, when they say they’ll do it.”
